

Disc Orientation

Procedure for orienting the disc correctly:

Nearly all EXEDY discs are marked with T/M SIDE on one side of the disc; this side of the disc should always face the transmission. The retaining plate protrudes on this side, as shown below:

Transmission Side

Flywheel Side

MZD099, NSD134 & NSD152

MZD099, NSD134 and NSD152 are exceptions to the above. When fitting these discs it is important to note the correct orientation. The splined hubs of these discs protrude towards the flywheel side and **NOT** the transmission side as may be expected.
