

Kit Reference: MZK2135SMF

The procedure for fitting the Bearing to the Bearing Carrier

A clutch release bearing and carrier is supplied in this clutch kit. The bearing must be assembled to the bearing carrier prior to fitment to the release fork.

Note: Retainer clips are not required for fitment of the bearing carrier to the release fork.

Assembly procedure

Release bearing and carrier as supplied in MZK2135SMF

Using a hydraulic press the bearing must be carefully pressed onto the carrier ensuring there is no damage to either part.

It is imperative that the bearing is orientated the correct way; the contact surface with the radius should face away from the bearing carrier – the flat edge (with the part number on) should face the bearing carrier.
